Infection with New Coronavirus

The Company confirmed one temporary employee working in the Isehara Plant (80 Itado, Isehara City, Kanagawa Pref.) has been infected with New Coronavirus.

We checked the person's activity history and identified people who had contacts with the person. For those identified, we instructed them to stay at home and perform PCR tests, and implemented thorough cleaning and sterilization of the workplace to avoid further infection. Besides, There is no effect on our production in all of our plants.

We sincerely apologize for any anxiety or concern that this may cause to customers, suppliers, people in the surrounding regions and all the others concerned.

We have implemented all the measures to avoid our employees from catching the virus, such as frequently washing their hands and wearing masks, and also have made maximum efforts to identify infected or possibly infected employees at the earliest possible stage. We will further strengthen those efforts to avoid infection and to secure safety and health of our employees.
